Crash Data Retrieval System

CDR System Version 3.1.1 (software patch)

BOSCH

CDR version 3.1.1 is a “patch” which is a minor software revision to CDR version 3.1. The patch is installed from an installation program which updates the main CDR program only. This is not a complete installation and CDR version 3.1 will need to be installed on your computer before running the patch software. CDR 3.1.1 addresses important issues that were found after the release of CDR version 3.1 software. The Release notes for this patch are displayed while running the installation program and will be copied to your computer once the installation program has updated your software. All functionality and vehicle coverage will remain the same as CDR v3.1 software.

What’s Included in the Patch?

The changes included in this patch are listed below:

- ▶ CDR report changes for supported Ford vehicles:
 - Simplified the wording for the case when the ACM Adapter is not detected during a late model Ford ACM download. The change is applicable to only vehicles that require the F00K108387 ACM adapter during downloads.
- ▶ CDR report changes for supported GM vehicles:
 - Added supported for several SDM software module IDs for Pontiac G8 and select 2005 – 2009 light trucks and SUVs.
 - Changed display of the raw data for maximum velocity change and time to maximum velocity change in ETR reports for select 2007 thru 2009 light trucks and SUVs.
 - Changed the reported values for “Rollover Sensor Status” in ACM downloads on some late model GM vehicles equipped with rollover sensors.”
 - For select 2008 thru 2009 light trucks and SUVs, display values for the following data parameters were corrected:
 - Associated Events Not Recorded
 - An Event(s) Followed the Recorded Event(s)
 - The Event(s) Not Recorded was a Deployment Event(s)

- ▶ CDR report changes for supported Chrysler vehicles:
 - Corrected the displayed acceleration data polarity for various vehicles to be consistent with SAE 211 and SAE 1733 standards.
 - Corrected time order of pre-crash data for 2008 – 2009 Minivan and 2009 Journey

Instructions

Follow the steps below to download and install CDR version 3.1.1 patch. It is important to note that this patch will only work when CDR version 3.1 is installed on your computer prior to installing this patch. Make sure you do not have other programs running during this installation and that the CDR application is also not running.

1. From the Bosch Diagnostics CDR website (www.boschdiagnostics.com/testequipment/cdr), go to the *Software Downloads* page (link on the right hand side) and download the “CDRv3.1.1_setup.zip” file to your computer’s Desktop or local folder.
2. Unzip the *CDRv3.1.1_setup.exe* patch installation program file from the zip file into same folder.
3. Run the installation program by double clicking on it.
4. Follow the prompts on the screen to complete the installation.
5. Once you have installed the CDR patch, launch the CDR program and verify that the version number is displaying *3.1.1*. To do this, simply click on the *Help* menu item in the CDR application and then click *About CDR*.

Supported Operating Systems

CDR version 3.1.1 software is currently supported on the following operating systems:

- Windows 2000
- Windows XP (Home and Pro for PCs)
- Windows Vista

Version 3.1.1 Software and CDR Interface Module

Compatibility

This software version is compatible only with the blue and green metal CDR interface modules marked with a CAN plus logo on its label. Other versions of the CDR module (black plastic or blue units without the CAN plus logo) are not supported and can cause the software not to function as intended. To purchase a current CDR Interface Module, please contact Bosch Sales Support at: 1 (800) 321-4889 ext. 4, option 1.

Having Trouble?

Contact Bosch Technical Support if you are having trouble installing this software patch.
